

Datalynx Data Management Suite (DMS) Enterprise Solutions Platform

The Datalynx DMS - the world's most versatile data solutions platform, offers a broad range of integrated, pre-built & customisable business solutions.

With the ability to operate in conventional, Cloud and hybrid environments, the DMS underpins many sophisticated products utilised by the world's largest SIs & technology platform providers.

Some of the primary use cases for the DMS include:

- * in-house enterprise data management platform
- * specific-use solutions (e.g. data quality management, data masking , MDM)
- * prebuilt, repeatable solutions (e.g. ERP migration to Oracle Cloud apps)
- * high productivity data services delivery technology for services vendors.

The DMS is available to technology vendors, services providers and end-user technical teams via a flexible licensing model, including end-user perpetual licences, SaaS subscriptions and services partner software leases.
